Find the perfect  
faucet to  
create the best  
experience for  
any washbasin

With hansgrohe ExcellentFit, we make it easy for you to find your perfect combination of faucet and washbasin. In our ComfortZone test, our Technical Service Center regularly checks which of our hansgrohe washbasins go best with our faucets to ensure a harmonious interaction.

In this ComfortZone Test, we tested and measured hansgrohe Xelu Q washbasins with different hansgrohe faucets to give you our expert recommendation.

# The ComfortZone Test

---

## More comfort

Does the faucet-washbasin pairing provide enough usable space? We position a test piece between the faucet and washbasin to see if it's possible to wash your hands comfortably.

## Less splashing

Does the water splash when the faucet is operated? By opening and closing the mixer with differing water pressures, we observe patterns and collect data that are then evaluated.

## Fewer water stains

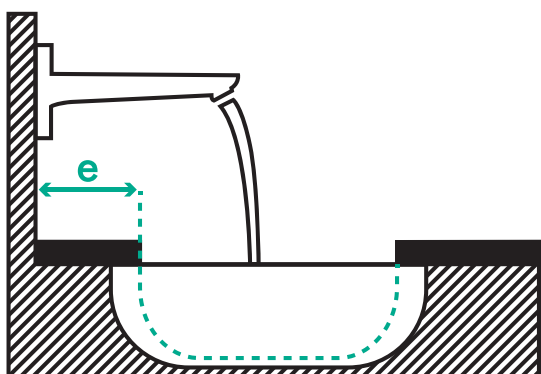

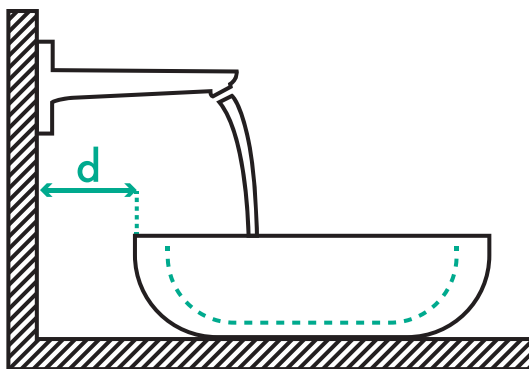

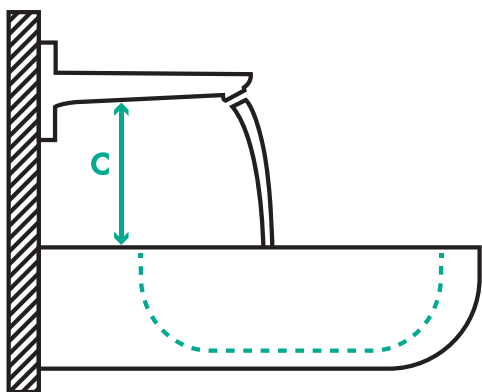

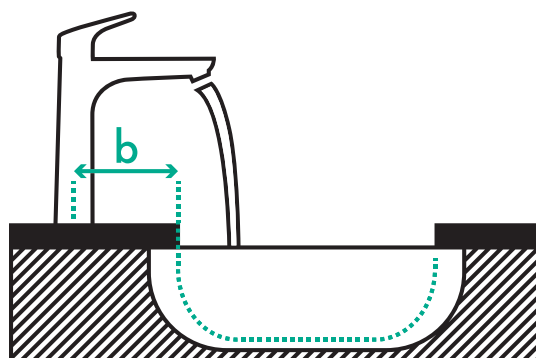

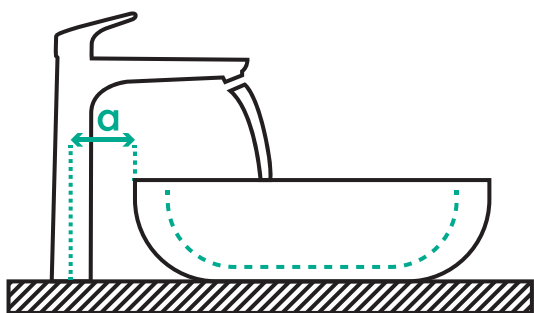

Does the water splash when you wash your hands? We pass a standardized hand model back and forth under the stream of water and observe and evaluate the data and patterns outside the basin.

# Note on assembly

In the following illustrations, you will find important information to keep in mind when installing your hansgrohe faucet on your favorite washbasin. The letters in the graphics indicate the relevant points for measurement. The dimensions in the tables indicate the corresponding distances between the faucet and the washbasin. If you have some flexibility in the position of the faucet, please consider these dimensions for a professional installation.

## When taking measurements, please note:

If you are incorporating a build-in washbasin or a washbasin above the counter, use the outer edge of the washbasin as a reference point. If, on the other hand, you are incorporating a washbasin under the counter, use the inner edge of the washbasin as a reference point.
