CLEANING RECOMMENDATION FOR AXOR PRODUCTS

Today, modern sanitary and kitchen tapware, showers, accessories, washstands, sinks, tubs and radiators consist of very different materials to comply with the needs of the market with regard to design and functionality.

To avoid damage and reclamations, it is necessary to consider certain criteria when cleaning.

WITH REGARD TO CARING FOR THE AXOR PRODUCTS, THE FOLLOWING MUST IN PRINCIPLE BE HEHEDED:

- / Only use cleaning material which is explicitly provided for this type of application.
- / Never use cleaning materials, which contain hydrochloric acid, formic acid, concentrated caustic soda, chlorine pale lye or acetic acid, as they cause considerable damage.
- / Phosphorus acidic cleaners are only conditionally applicable.
- / Mixing cleaning agents is not permitted, generally.
- / Never use cleaning materials or appliances with an abrasive effect, such as unsuitable cleaning powders, sponge pads or micro fibre cloths.
- / The safety instructions of the cleaning agent manufacturers must be strictly followed.
- / Cleaning has to be carried out with a specified cleaner dosage, contact time, object-related and adapted to the needs.
- / The building up of calcifications has to be removed by cleaning regularly.
- / When using spray cleaners, spray the cleaning solution onto a soft cloth or sponge, never directly onto the Axor products, as the atomised spray could enter openings and gaps in the Axor products and cause damage.

- / After cleaning rinse thoroughly with clean water to remove any cleaner residue.
- / The use of steam cleaners is not permitted. The high temperatures can damage the products.
